## California Field Crops

California's 2000 field crop production was worth \$3.20 billion at the farm-gate level. This value was 2 percent higher than the previous year.

The average value per harvested acre increased from \$609 in 1999 to \$642 in 2000. Production of the major field crops in California reached 27.6 million tons, down 4 percent from the 28.6 million tons produced in 1999.

## NOTABLE INCREASES IN VALUE OCCURRED AS FOLLOWS:

Corn for Grain	30%
Cotton	34%
Cottonseed	16%

## SIGNIFICANT DECLINES IN VALUE OCCURRED AS FOLLOWS:

Dry Beans	14%
Rice	10%
Sugar Beets	12%
Wheat	14%

Cotton was the state's highest-valued field crop with a total of \$898 million, overtaking all hay with a value of \$730 million. Nationally, the Golden State is the leading alfalfa-producing state and ranked second in all cotton and all hay production.

The 34 percent increase in the value of cotton was based on an 8 percent increase in harvested acreage, a 17 percent increase in production, and a 14 percent increase in the unit price. The 2000 cotton crop was planted on schedule, but rainfall and cool temperatures during April forced some replanting. Much of the American Pima cotton that was abandoned in the spring was replanted to Upland. The crop progressed well throughout the year with only occasional problems. Insect pressure was generally light and good fall weather allowed harvest to progress with very few problems.

The large increase in corn for grain production is attributed, almost entirely, to a 27 percent increase in harvested acreage. Rice production actually showed a 19 percent increase in production, but the unit price declined 24 percent resulting in a 10 percent decline in total value. The large decrease in dry bean value is attributed, almost entirely, to a 15 percent decline in harvested acreage, as the unit price remained unchanged from the previous year. Winter wheat production declined 15 percent, while Durum wheat production increased 9 percent. Lower prices for both winter and Durum wheat resulted in a 14 percent decrease for all wheat.

- 1/ Production is on a clean basis.
  2/ Dashes represent data not published due to the estimate being discontinued, not estimated, or not available.
  3/ Included in "Beans, Other Dry."
  4/ Includes varieties not listed separately. Excludes beans grown for garden seed.

- 5/ Cotton bales are 480 lbs. net-weight.
  6/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1991-00.
- 7/ Excludes sweet and wild rice.
- 8/ Includes some acreage carried over and harvested the following spring.
